

Parents: Does Your Child Struggle With Maths?

Does your child struggle with Maths? If they do, there can be nothing more frustrating. You want to help, but don't quite know how to.

JD Booster provides an easy to use structure to help your child master the complexities of Maths between 11 to 14. It's this Maths that will be the foundation for GCSE success, and the Maths they will use for the rest of their lives.

EASY TO GET STARTED

It's simple to get started. There are eight workbooks available with a wide variety of short exercises from topics right across the Key Stage 3 Maths curriculum. It's like a full Maths workout for your child.

Each week, just go through one exercise with them and have them do one exercise in their own time.

Emphasis is on pen and paper approach - allowing your child to grapple with and master the key mathematical concepts that they need to understand.

A DRAMATIC DIFFERENCE

Within weeks you'll notice a dramatic difference.

Because the exercises are planned from every topic in the curriculum your child will cover everything – even if it was a year or two ago since they last covered it at school.

Suddenly all those dim and distant memories will be brought right to the forefront of their mind, enabling them to master the entire curriculum.

ENGAGING AND PRACTICAL EXERCISES

The short exercises within the workbooks are designed to increase engagement in Maths.

As they progress through the course, the exercises get tougher to keep them interested and on-task. But don't worry – there are full answers in each workbook so it will only be *their* Maths we're testing, not yours.

The exercises are also incredibly practical, allowing children to see the key role that Maths has to play in the world around them.

In fact it's so engaging that you won't need to keep chasing your child to complete the workbooks. Every child who has completed the programme so far, finds it a fun and enjoyable way to master maths - they'll be the ones chasing you for more!

FIND OUT MORE
