

Accelerate Maths Learning in Your Tuition Centre

JD Booster is the ideal solution both for existing tutors looking to accelerate their students' progress, and for new tutors looking for a complete tutoring structure that can deliver dramatic benefits.

A SIMPLE STRUCTURE

Already used by many across the country, the JD Booster method adapts perfectly to the setting of a tutorial. Just go through one of the exercises each week as part of your session, then set another to be completed before the next one – it's that simple.

Because it's designed to be supplementary to the learning the child receives at school, you'll be able to strengthen their understanding of the key topics without repetition and to make the tutorial experience distinctly different.

BROAD AND BALANCED LEARNING

Each exercise contains a mix of questions on all aspects of topics from the Key Stage 3 curriculum, so you'll be giving them broad and balanced support on every area they need to master.

The questions themselves are very practical – requiring students to show real understanding of which approaches to apply in which situations.

Opportunities**

The practical questions also make a big difference to motivation. Rather than abstract concepts students are able to understand how Maths applies to everyday aspects of their life, making it much more engaging and something they actually want to master.

MAKE QUICK AND EASY ASSESSMENTS

Free level assessments are provided with the workbooks and a free online analysis tool. Together they allow you to make a quick and easy diagnosis of where a student's strengths and weaknesses lie.

You can also use these assessments to demonstrate progress, and provide concrete feedback to their parents that your sessions are really making a difference.

FIND OUT MORE

If you would like to find out more about how JD Booster could work in a centre, please get in touch on +44 (0) 79121 01923 or visit our website at www.jdbooster.com
